

APPENDIX A

1 27. (New) A method for analyzing a network, comprising:
2 accumulating network traffic information from at least one computer utilizing an
3 information collector;
4 transmitting the network traffic information to an information collector manager;
5 and
6 generating a map of the network based on the network traffic information.

1 28. (New) The method as recited in claim 27, wherein the information relates to
2 wireless network traffic.

A 1 29. (New) The method as recited in claim 27, wherein the map includes a correlation
2 among computers associated with the network traffic information.

1 30. (New) The method as recited in claim 27, wherein the map includes a mapping
2 of computers associated with the network traffic information.

1 31. (New) A computer program product for analyzing a network, comprising:
2 computer code for accumulating network traffic information from at least one
3 source utilizing an information collector;
4 computer code for transmitting the network traffic information to an information
5 collector manager; and
6 computer code for generating a map of the network based on the network traffic
7 information.

1 32. (New) The computer program product as recited in claim 31, wherein the
2 information relates to wireless network traffic.

1 33. (New) The computer program product as recited in claim 31, wherein the map
2 includes a correlation among computers associated with the network traffic
3 information.

1 34. (New) The computer program product as recited in claim 31, wherein the map
2 includes a mapping of computers associated with the network traffic
3 information.
